

# Radiodermatitis

Eric Roovers - Specialised wound care nurse  
Middelheim ZNA - Antwerp

## Introduction

85 year old woman.  
Radiotherapy following SCC tonsil.

09. August

Start Flaminal® Hydro + paraffin dressing + non-sticky end bandage

- T: painful red slightly fibrinous wound bed
- I: risk of infection due to reduced immunity
- M: moderate exudate
- E: regular wound edges

19. August

Start Flamigel®

- T: pain disappeared, red granulating wound bottom
- I: no infection
- M: moderate exudate
- E: wound edges grow towards each other

19. September

- T: small residual lesion
  - I: no infection
  - M: little to no exudate
  - E: smooth wound edges
- Wound almost healed after 1.5 months.

Flaminal® Hydro / Flaminal® Forte support the natural healing process and protect against infections.
